

Tech Training: New Encore Project

Project Settings

Upon opening Encore, choose either DVD or Blu-ray. Next, specify the project folder in which the project should be saved.

NOTE: Encore has a tendency to save to the last folder used.

Click OK

Add a Timeline

For Encore to work, the video will need to be on a Timeline.

If you have not brought in the media file yet, click "File" > "Import As" > "Timeline".

If you imported a project from Premiere, this has already been done for you.

If you have multiple media files to import, you have several options.

- Import additional files as assets
 - This option allows you to bring in files to be added to the present timeline. These can be arranged in the sequence you want.
- Import files as a separate timeline
 - The benefit here is that you can have more control over how each clip is played, when it stops, when it returns to the main menu, chapter markers for each chapter, etc.
