

Tech Training: Optical Disc Cloning

Often we will get requests from clients to create a CD or DVD and make multiple copies. An easy way to copy a disc is to use the Optical Disc Cloning Towers in Zone 023. The Towers can copy up to 10 discs at a time from a master disc. This makes the process much quicker than copying one disc at a time.

CD/DVD Cloning

- Power up one of the Towers
 - The button will be rimmed in blue light when on

- The screen should read 'Copy Auto Run? (DISCtoDISC)'
- Insert master disc in the top drive/tray
- Press Yes
- Insert blank disc(s) in lower drive/tray
 - It will think for a while. If it gets to be more than a minute or so, press Yes again.

- Track copy progress using the on-screen display
- When completed, label the discs and insert into a paper sleeve
