

Tech Training: Banner

Java is required for Banner. Default Java settings do not work; there are two changes that must be made:

- Open Java Control Panel
 - Control Panel > Java
- Move to the Advanced tab
- Enable the following options
 - Use TLS 1.0
 - Use TLS 1.1
 - Use TLS 1.2
- Disable the following options
 - Use SSL 2.0 compatible ClientHello format

NOTE: As of Sept, 2015, the Chrome browser no longer supports Java. Banner will not function in Chrome.
